

FLUID

INTERIOR
LININGS

Fluid specialises...

... in the provision of high quality interior decoration for temporary structures, venues and exhibitions to create stylish and contemporary finishes. With 15 years experience, Fluid's creative edge incorporates fabric engineering, artistic flair, contemporary fashions and exciting materials.

With an in-house design and development service, Fluid generates unique ideas and dynamic solutions to any project with full project management from initial concept to final delivery.

Fluid's environmentally designed lining systems incorporate the modern **Tack Off** to the **Ultra Stretch**.

INTERIOR LININGS

Tack Off Linings

The Tack Off interiors are produced by skilled staff and combine superior sewing techniques and heavier fabrics with a contemporary design and finish. Tack Off is the ultimate fabric finish providing creative interior linings using a wide variety of fabrics, patterns, colours and fabric weights.

- Rigid timber framework invisible behind walls
- Conceal and enhance any feature within a temporary structure or venue
- Transform venues with stage sets, exhibition stands and room divides
- Finishing options include: Corner posts, door returns and headers, stile covers and leg boxes
- Blackout on non-opaque walls

Ultra Stretch Linings

Ultra Stretch is an extremely high quality reusable tack off finish, exclusive to Fluid. The system uses superior heavyweight inherently flame retardant (IFR) fabric, which has a 10% stretch creating our characteristic taut finish. Designed to be quick to install and dismantle, Ultra Stretch allows access for third party contractors after installation. Ultra Stretch is environmentally sustainable as it allows multiple reuses of the fabrics and limits the need for consumables.

- Superb 'tack off' alternative
- Scalable panels for any structure
- Super wide 3.2m fabric widths allows seamless walls
- No framework visible behind walls
- Easy hook and zip attachment system
- Removable valances with a range of depths and colours
